Proxy service

The web interface, which is only accessible over the local network by default, can be exposed to the public internet in multiple ways. In situations where companies administer their own users / cards, this is typically a requirement.

For a relatively care free way to expose the web interface, we offer a proxy service where (in the simplest form) the web interface is accessible on **https://<customer specific name>.intoaccess.nl.**

This does not require the configuration of any incoming firewall 'holes' and leaves the domain registration and SSL certificate handling to us.

This proxy service is offered as a subscription, which allows quarterly or yearly payments.
